

**From Start to Finish,  
Worry-Free Design/Build Execution**

Nearly forty years of experience in the water and wastewater treatment industry has allowed BCI to prove time and again that our exclusive focus on water treatment solutions makes us an invaluable design/build partner.

**Our Process**

BCI utilizes the experience of recognized technical experts to provide full-service solutions through all phases of a project.

From initial facilities planning through design, permitting, construction, start-up and full-scale operation, BCI applies cutting edge technology to each project and responds to client demands with cost effective answers.

**Benefits of Design/Build**

Through the design/build process, BCI can reduce risks and save time. We are your single source throughout the entire project, offering complete accountability and greater value:

- As your single source of communication, owners can address all questions, revisions, concerns and feedback to one entity.
- The buck stops here. Because you are dealing with one entity – BCI – we are accountable for all aspects of the process.
- In overseeing the complete process of your design/build, we can integrate the knowledge of all the experts working on your project. Therefore, we ensure the best materials and methods are used to offer the greatest value to you at every stage of the project.

*“BCI exercises the best follow-up procedures to ensure quality. They are constantly communicating with everyone on the project to make sure things are going properly. While finishing on time and under budget, they still seem able to handle any challenges that come up. Their experience in the field definitely shows.”*

*–Tommy Jackson,  
Environmental Engineer,  
Nestle Prepared Foods*

**Design/build by BCI for pre-treatment plant additions for Nestle Prepared Foods.**

**Design/Build for General Mills by BCI to treat process water for non potable reuse:**

**Outside Aeration Tanks**

**Membrane System**

*“I can’t say enough good about the BCI site foreman and team that built our storm water pumping station. They were efficient and cooperative...followed our safety and sanitation policies... creatively navigated roadblocks...managed subcontractors professionally...and left their work areas absolutely spotless.”*

*–Plant Technical Manager,  
Fortune 500 Corporation*
