

“Fair, honest and very professional is how I would describe BCI. They always have their customer’s needs in mind. The Northern Kentucky Water District has done a number of projects with them and BCI has always gone above and beyond what a general contractor usually does.”

Jim Dierig, Project Manager, Northern Kentucky Water District

Our Mission and Vision

Building Crafts, Inc. is a leading regional firm in the construction of water and wastewater treatment facilities. We achieve this by applying innovative and effective construction methods as well as providing a safe and rewarding work environment for our employees.

Your Best Interest First

Since 1972, clients throughout the mid-western, eastern and southern US have relied on Building Crafts, Inc. for cost-effective construction of water and wastewater facilities. We provide clients with a full range of treatment plant services including design/build, construction management, general contracting, facility maintenance and repair.

Water and Wastewater Treatment

Experts

GENERAL CONTRACTING

General Contracting and more...

Nearly forty years of experience in the water and wastewater treatment industry has allowed BCI to prove time and again that our exclusive focus on water treatment solutions makes us an invaluable business partner for industries and municipalities throughout the mid-western, eastern and southern United States.

Services

- General Contracting
 - Construction Management
 - Design/Build
 - Maintenance and Repair
 - River, Barge and Underwater Work
-
-

Our focus on the water and wastewater treatment industry has allowed BCI to become the industry leader in our field. We are able to offer the most economical solutions without sacrificing efficiency or quality.

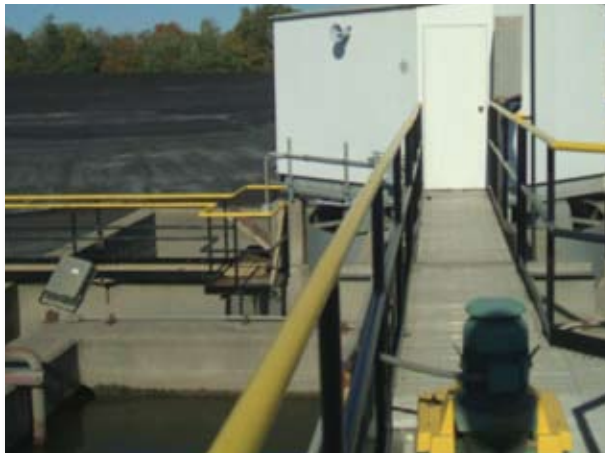

- During construction, we use value engineering of the treatment processes to ensure that the best/most cost-effective technologies are applied. Regular team meetings are held to ensure all issues are addressed proactively while construction proceeds.
- Integrated communication and coordination systems are implemented to prevent schedule conflicts and minimize disruption to operations of the existing plant.
- BCI offers customized maintenance services to provide quick and economical repairs and upgrades.

New Gyratory Rock Crusher at the Three Rivers Quarry in Smithland, Kentucky for Martin Marietta

“BCI is a very organized and well-managed company. This is evident in their men working in the field and in the planning of their field leadership. The timing of our first project with BCI was critical in order to meet a defined start-up date. Martin Marietta’s engineers and operations people were kept well-informed on both the construction activity and the process in which it was to be completed. Ultimately, we were able to meet that start-up date.”

—Richard Pluta, Senior Project Manager, Martin Marietta

Coal-fired Power Generation Station - Water Filtration

“Building Crafts has provided us with excellent service for over 20 years. Whenever we need concrete, plumbing or sewer work, it’s as good as done with one call to BCI. I don’t want to use anyone else, and usually don’t call anyone else.”

—Arvil Pennington, Operations Manager, River Metals Recycling

River Metals Recycling

Sample General Contracting Projects

- Sanitation District #1, Maintenance Contract
- River Metals Recycling, Concrete, Buildings, Equipment, Truck Scales
- Coal-fired Power Generation Station - Water Filtration
